

CA DESIGN CELEBRATES THE DELIVERY OF OVER 5,000  
PREMIUM PRINTED CIRCUIT BOARD DESIGNS

*A PCB design service leader specializing in Cadence Allegro layout, CA Design is celebrating the delivery of over 5,000 top-quality Printed Circuit Board designs for hundreds of leading companies.*

Cupertino, CA (April 15, 2009) – Silicon Valley-based CA Design is celebrating the completion of over 5,000 PCB designs—circuit boards of all sizes, types, and complexities—accomplished within twenty-one years in the industry. As a PCB design service bureau, unmatched in terms of quality versus cost, personalization, and variety of services offered, CA Design is a one-source solution for printed circuit board layout, training, project management, and fabrication and assembly.

Founded in 1988 by Robert Chandler, CA Design was built as a family business with the goal of offering personalized customer service and the best PCB designs for the lowest cost. The company, which employs only advanced, senior-level designers, has built a substantial repeat-client base over the years due to their exceptional design service and standard protocol to go above and beyond customer expectation.

“At CA Design, we know the importance of customer service. Over the years we have made many sacrifices to ensure the client receives a top-quality, viable design on-time. If it means a client becomes a repeat customer, the sacrifice is always worth it.” –Robert Chandler, Founder.

Today, the company thrives—as evidenced by the watershed mark of 5,000 PCB designs rendered—and has maintained its family business core every step of the way.

“The CA Design family no longer encompasses only Bob, myself, and our daughter—it has expanded over the years to include our employees, our clients, and our students as well. And that’s how we like it. When you work with us, you get professionalism and personalization. We look forward to reaching our next goal of 10,000 premium PCB designs rendered.” –Carolle Chandler, Projects Coordinator

More About CA Design:

Chandler Automated Design was founded in 1988 by Robert Chandler as a high-quality, low-cost source for Printed Circuit Board design, fabrication and assembly, training, and project management. CA Design produces premium designs for digital boards, small analog boards, ECL, RF, high-speed, surface mount, chip on board, and micro-via and specializes in various software platforms including, Cadence® OrCAD®, Mentor Board Station, Cadence® Allegro® PCB Editor, PADS Power PCB, Protel, PCAD, Cadstar, and Mentor Expedition. CA Design’s experienced designers, personalized service, and premium designs are the reason so many customers have become repeat clients over the past twenty-plus years. We stake our reputation on the quality of our work, training, and service.
