

iLEARN PCB LAYOUT - NEW FROM PCB DESIGN SERVICE BUREAU AND TRAINING LEADER
CA DESIGN - OFFERS TWICE THE VALUE OF OTHER PCB DESIGN TRAINING PROGRAMS

A unique PCB design training program from CA Design, iLearn PCB Layout offers engineers a world-class education, ultimate flexibility, and the opportunity to use a board they're currently working on for what is essentially a free, on-going consultation over the web.

San Jose, CA (July 14, 2009) - Silicon Valley-based CA Design is changing the way online Printed Circuit Board training is being offered. Design engineers who take part in iLearn PCB Layout's web-based platform will be afforded ultimate flexibility and cost-savings while learning from the best in the business. This unique program offers engineers the option to start wherever in the PCB design process they desire, using industry-preferred Cadence Allegro software.

With iLearn PCB Layout, engineers have the ability to learn using the actual board they are currently designing, allowing them to receive expert feedback and help with any issues as they learn - essentially a free, real-time consultation in conjunction with one-on-one PCB training.

Recognizing the limitations of other available web-based PCB training programs, including their former offering, Virtual Classroom, CA Design has set out to offer engineers a better, more complete and advanced service that has the flexibility of meeting every PCB designer's needs no matter where they are in the training process - even if they simply need a refresher course. CA Design's seasoned instructors know the design software intimately and can help engineers learn its pitfalls, bugs, and limitations as well as how to get around them.

The company, which has HP Worldwide as a client, prides itself on superior design skills and has chosen to share the vast and insightful knowledge and abilities of its staff nationally, utilizing several different educational platforms including, traditional classroom, live online (iLearn PCB Layout), and DVD training.

More About CA Design:

Chandler Automated Design was founded in 1988 by Robert Chandler as a high-quality, low-cost source for Printed Circuit Board design, fabrication and assembly, training, and project management. CA Design produces premium designs for digital boards, small analog boards, ECL, RF, high-speed, surface mount, chip on board, and micro-via and specializes in various software platforms including, Altium® DX Designer®, Cadence® OrCAD®, Mentor Board Station, Cadence® Allegro® PCB Editor, PADS Power PCB, Protel, PCAD, Cadstar, and Mentor Expedition. CA Design's experienced designers, personalized service, and premium designs are the reason so many customers have become repeat clients over the past twenty-plus years. We stake our reputation on the quality of our work, training, and service.
