CA DESIGN'S NEW VIRTUAL PCB LAYOUT SERVICE PROVIDES FLEXIBLE, CUSTOMIZED GUIDANCE OR COMPLETION OF PRINTED CIRCUIT BOARDS ALREADY IN PROGRESS

Official HP Worldwide PCB design training company and leading PCB design service bureau, CA Design announces flexible and customized virtual assistance for engineers needing specific help finishing in-progress printed circuit boards. CA Design offers live coaching support or completion of a board, of any size or complexity, by a senior designer through its Virtual PCB Layout Service.

San Jose, CA (PRWEB) December 8, 2009 – CA Design, a leader in printed circuit board (PCB) design, announced today that it is now offering a Virtual PCB Layout Service for boards that are in progress but are at a standstill due to difficulties in the design process.

Engineers requiring this service will meet with a seasoned PCB designer and trainer for comprehensive guidance or to have the designer finish the board for the engineer. The process will be tailored to individual needs, including level of help and meeting availability, and is as simple as logging into the virtual meeting platform and getting the help necessary.

CA Design recognizes the need for coaching without formal training as well as for help with projects that have been started but not finished. Virtual PCB Layout can also provide software training without the expense and extra step of traditional training.

The Virtual PCB Layout Service is a flexible, affordable way to receive coaching, to finish a board expediently while ensuring that it is viable for manufacturing, as well as to receive software training informally, one-on-one.

About CA Design:

Chandler Automated Design was founded in 1988 by Robert Chandler as a high-quality, low-cost source for Printed Circuit Board design, fabrication and assembly, training, and project management. CA Design produces premium designs for digital boards, small analog boards, ECL, RF, high-speed, surface mount, chip on board, and micro-via and specializes in various software platforms including, Altium® DX Designer®, Cadence® OrCAD®, Mentor Board Station, Cadence® Allegro® PCB Editor, PADS Power PCB, Protel, PCAD, Cadstar, and Mentor Expedition. CA Design's experienced designers, personalized service, and premium designs are the reason so many customers have become repeat clients over the past twenty-plus years. CA Design stakes their reputation on the quality of their work, training, and service.
